

Think Safety First

Provide consultant services and training seminars for occupational safety and health, and hazardous materials and waste management.

We can assist clients to control potential hazards to employees, and the management of hazardous materials.

Consulting , training, development of regulatory compliance programs, and development of health and safety programs.

Hazard recognition

Monitoring of chemical exposures and related health effects

Confine space entry

Developing and implementation of safety plans

Selection and use of Personal Protective Equipment

Hazard communications

Audit health and safety programs for compliance with OSHA regulations

Risk assessments of physical hazards

Developing of standard operating procedures for hazardous materials management

Warehouse design for hazardous materials storage

Evaluation of and development of current health and safety programs

The provision of risk management services, regulatory compliance programs development, hazmat training and hazard evaluation, the selection of adequate Personal Protective Equipment can support our clients in their commitment to workplace safety, safe handling and transportation of hazardous materials, hazardous spills, fires and emergency response.

A confident and well trained staff will have fewer accidents, fewer workers' compensation claims and absenteeism resulting in increased productivity and profitability, and possible reduced insurance premiums to the business.
